

TEXAS TIMBER PRICE TRENDS

Market Overview*

U.S. housing starts in February were down 6.4% compared to a year ago. The housing market was weak in the last three months primarily due to adverse weather conditions. Shortage of buildable lots and skilled workers were cited as other factors behind this slow pace. A rebound in building permits, however, indicates that the market will improve this spring selling season. A reporter noted that pulpwood flow in East Texas was high.

Statewide pine sawlog prices averaged \$23.91 per ton, up 11% from last period and down 3% from the price a year ago. In Northeast Texas, average pine sawlog price was \$28.52 per ton and it was \$20.94 per ton in Southeast Texas.

The statewide average pine pulpwood price decreased to \$7.76 per ton. This was down 3% from last period and up 6% from the price a year ago. In Northeast Texas, the average pine pulpwood price was \$7.44 per ton. It was \$7.93 per ton in Southeast Texas.

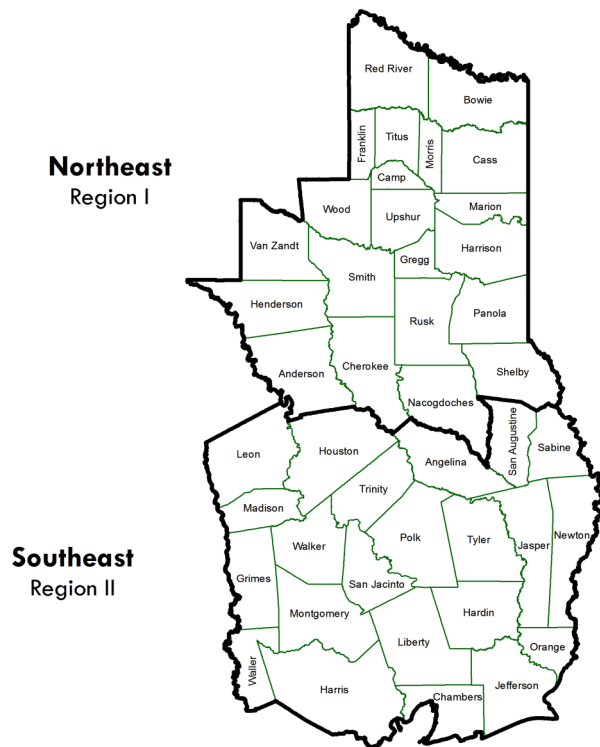

Small diameter pine sawlogs (CNS) averaged \$11.63 per ton statewide, down 2% from last period. It was up 21% from the price a year ago.

The average hardwood sawlog price was \$29.45 per ton, 7% higher than last period and 3% lower than the price reported a year ago.

The average hardwood pulpwood price was \$8.13 per ton, 32% lower than last period. The price this period was 41% lower than the price for the same period last year. In Northeast Texas, the average price was \$9.90 per ton. It was \$6.18 per ton in Southeast Texas.

*The average prices reported here represent statewide volumes of 93,246 tons of pine sawlogs, 405,985 tons of pine pulpwood, 39,340 tons of pine CNS, 2,101 tons of mixed hardwood sawlogs, and 15,095 tons of hardwood pulpwood during January/February 2014.

1. Stumpage price statistics include gatewood sales. Stumpage prices for gatewood sales are estimated by subtracting cut-and-haul costs, other expenses, and profits provided by reporter.
2. Price is calculated from a specific conversion factor reported for each sale if available; otherwise, the average conversion factors listed on page 4 are used. MBF = Thousand Board Feet. The DOYLE LOG SCALE is used for board foot measurements.
3. Statewide data excludes U.S. Forest Service sales.
4. ** indicates insufficient sales to report price statistics (less than three sales).
5. Prices listed for previous periods may differ from previously published values because additional data have been received.
6. Price change in percentage is calculated based on price in ton.
7. Extreme outliers from reported data are detected and filtered out based on statistical methods.

Texas Timber Price Trends is a bi-monthly publication reporting average prices paid for standing timber in Texas.

This report is intended only as a guide to general price levels. Individuals inter-

ested in buying and selling timber can use this report to monitor market trends and get a general idea of what timber is worth. However, it should not be used to judge the fair market value of a specific timber sale, which may vary considerably due to many factors.

HOW ARE AVERAGE PRICES CALCULATED?

Data published in this report are from actual timber sales as reported by as many as 60 cooperators active in the East Texas timber market. Reporters include forest product companies, logging contractors, consulting foresters, family forest landowners, financial institutions, and federal agencies.

The prices are volume weighted average prices. The price per ton for each product category is as reported or using a specific conversion factor provided by the reporters. When a specific conversion factor for each sale is not available, an average conversion factor listed here is used instead.

VOLUME CONVERSION FACTORS

Sawlogs & Chip-N-Saw

Pine— 8 tons=1 MBF-Doyle

Pine CNS— 2.7 tons= 1 Cord

Hardwood— 9 tons= 1 MBF-Doyle

Pulpwood

Pine— 2.7 tons=1 Cord

Hardwood— 2.8 tons= 1 Cord

This publication is also available on the Texas A&M Forest Service website at:
